A front end loader changes the tractor's center of gravity reducing its stability and increasing the risk of overturning. Greater instability occurs when the loader is raised as the center of gravity is raised and shifts forward. Uneven or loose terrain, obstacles, sharp turns, and jerky movement also increase instability and chance of rollover.

Serious injuries involving front-end loaders may begin with something very simple. In one instance, when a feedyard worker left a shovel on the ground and then noticed the loader was likely to run over it, the worker ran to get it, slipped and fell, and was nearly run over by the loader when it was backing up. Co-workers who realized the man was in harm's way waved their arms and shouted at ...
