Over-the-counter medications — such as ibuprofen (Advil, Motrin IB, others) and naproxen sodium (Aleve) — may help ease knee pain. Some people find relief by rubbing the affected knee with creams containing a numbing agent, such as lidocaine, or capsaicin, the substance that makes chili peppers hot.

Knee pain – Diagnosis and treatment – Mayo Clinic

The first step to treating running-induced knee pain is to rule out injury from trauma. If the meniscus is torn through, for example, the solution will be different. However, in cases in which the problem derives from a bad body alignment, you have to make an assessment of your running posture and footprint to understand exactly where the movement becomes misaligned how to correct it to restore balance.
