Weather and climate mapping are applied far beyond evening news broadcasts. Businesses, government agencies, and individuals rely on weather data and information products to drive economic growth, protect lives and property, and support decision-making. Meteorologists, climatologists, and GIS practitioners are increasingly integrating weather and climate data into their GIS workflows, combining them with other data to advance atmospheric science research; analyze the impact to populations, ...

A model climate or earth system model is very similar to a weather forecast model, but with many added physical processes (such as ocean circulations, sea and glacial ice, vegetation and soil wetness, human emissions of greenhouse gases and other pollutants) to better simulate long-term climate variability and change. The climate model naturally simulates realistic storms and weather, whose statistics are used to answer climate questions.

Climate Modeling 101: Weather Models
Improving spatial accuracy, usability of weather and climate models As a national center, NCAR aims to provide atmospheric data and models outputs to the broader community. Our GIS program develops methods and tools that facilitate the use of NCAR models in a GIS.
