Transmission line depend on the span of the conductor. Span having equal level supports is called level span, whereas when the level of the supports is not at an equal level is known as unequal level span. The calculation of conductor at an equal level shown below.

Traditional sag-tension programs use the fabricated conductor unit weight for their calculations. Trimble's new program adjusts the unit weight as a function of the temperature and creep. This feature can be turned on or off at the discretion of the design engineer.
