Oral and maxillofacial surgery is used to treat complex dental problems and medical conditions related to the mouth, teeth, jaws, and face. Much of the practice is focused on facial reconstructive surgery, facial trauma surgery, and dental procedures involving the jawbone (like wisdom tooth extractions and dental implants).

~~Oral and Maxillofacial Surgery: Preparation and Recovery~~

A common dental surgery is tooth extraction, which is usually necessary to resolve disease, trauma or an overcrowded mouth. Teeth that are visible above the gumline and can be pulled with forceps are usually removed by a simple extraction. You may undergo a surgical extraction when bone or tissue must be cut to remove the tooth.
